

Expert Panel on Air Quality Permitting Requirements under NSR and PSD

The Air and Waste Management Association (A&WMA) Mother Lode Chapter will be hosting an expert panel on air quality permitting requirements in California under the New Source Review (NSR) and Prevention of Significant Deterioration (PSD) programs. NSR and PSD regulations can be some of the most confusing to deal with when permitting new equipment or modifications to existing sources. They can also be very expensive to comply with when dealing with emission offsets, best available control technology (BACT), and air dispersion modeling requirements.

Our expert panel will be moderated by Pat Sullivan of SCS Engineers and will include:

- Paul Hensleigh, Deputy Air Pollution Control Officer, Yolo-Solano AQMD
- Jorge DeGuzman, Program Manager---Permitting, Sacramento Metro AQMD
- Christian Colline, Director Air Programs—West, Waste Management
- Gary Rubenstein, Principal, Foulweather Consulting

The experts will cover a variety of topics that they believe are critical to understand when complying with NSR/PSD as well as be available to answer questions from the attendees.

Come learn more about new developments and important issues for NSR/PSD permitting in the state. We will also include a brief demonstration of the A&WMA's updated NSR Guidance Manual, which is now available.

Date: Wednesday, January 24, 2018

Agenda:

- 5:30 PM – Arrival and Social
- 6:00 PM – Dinner
- 6:30 PM – Panel Discussion
- 8:00 PM – Adjourn

Location: California Air Resources Board Depot Park Facility
8340 Ferguson Avenue, Sacramento, CA 95828
